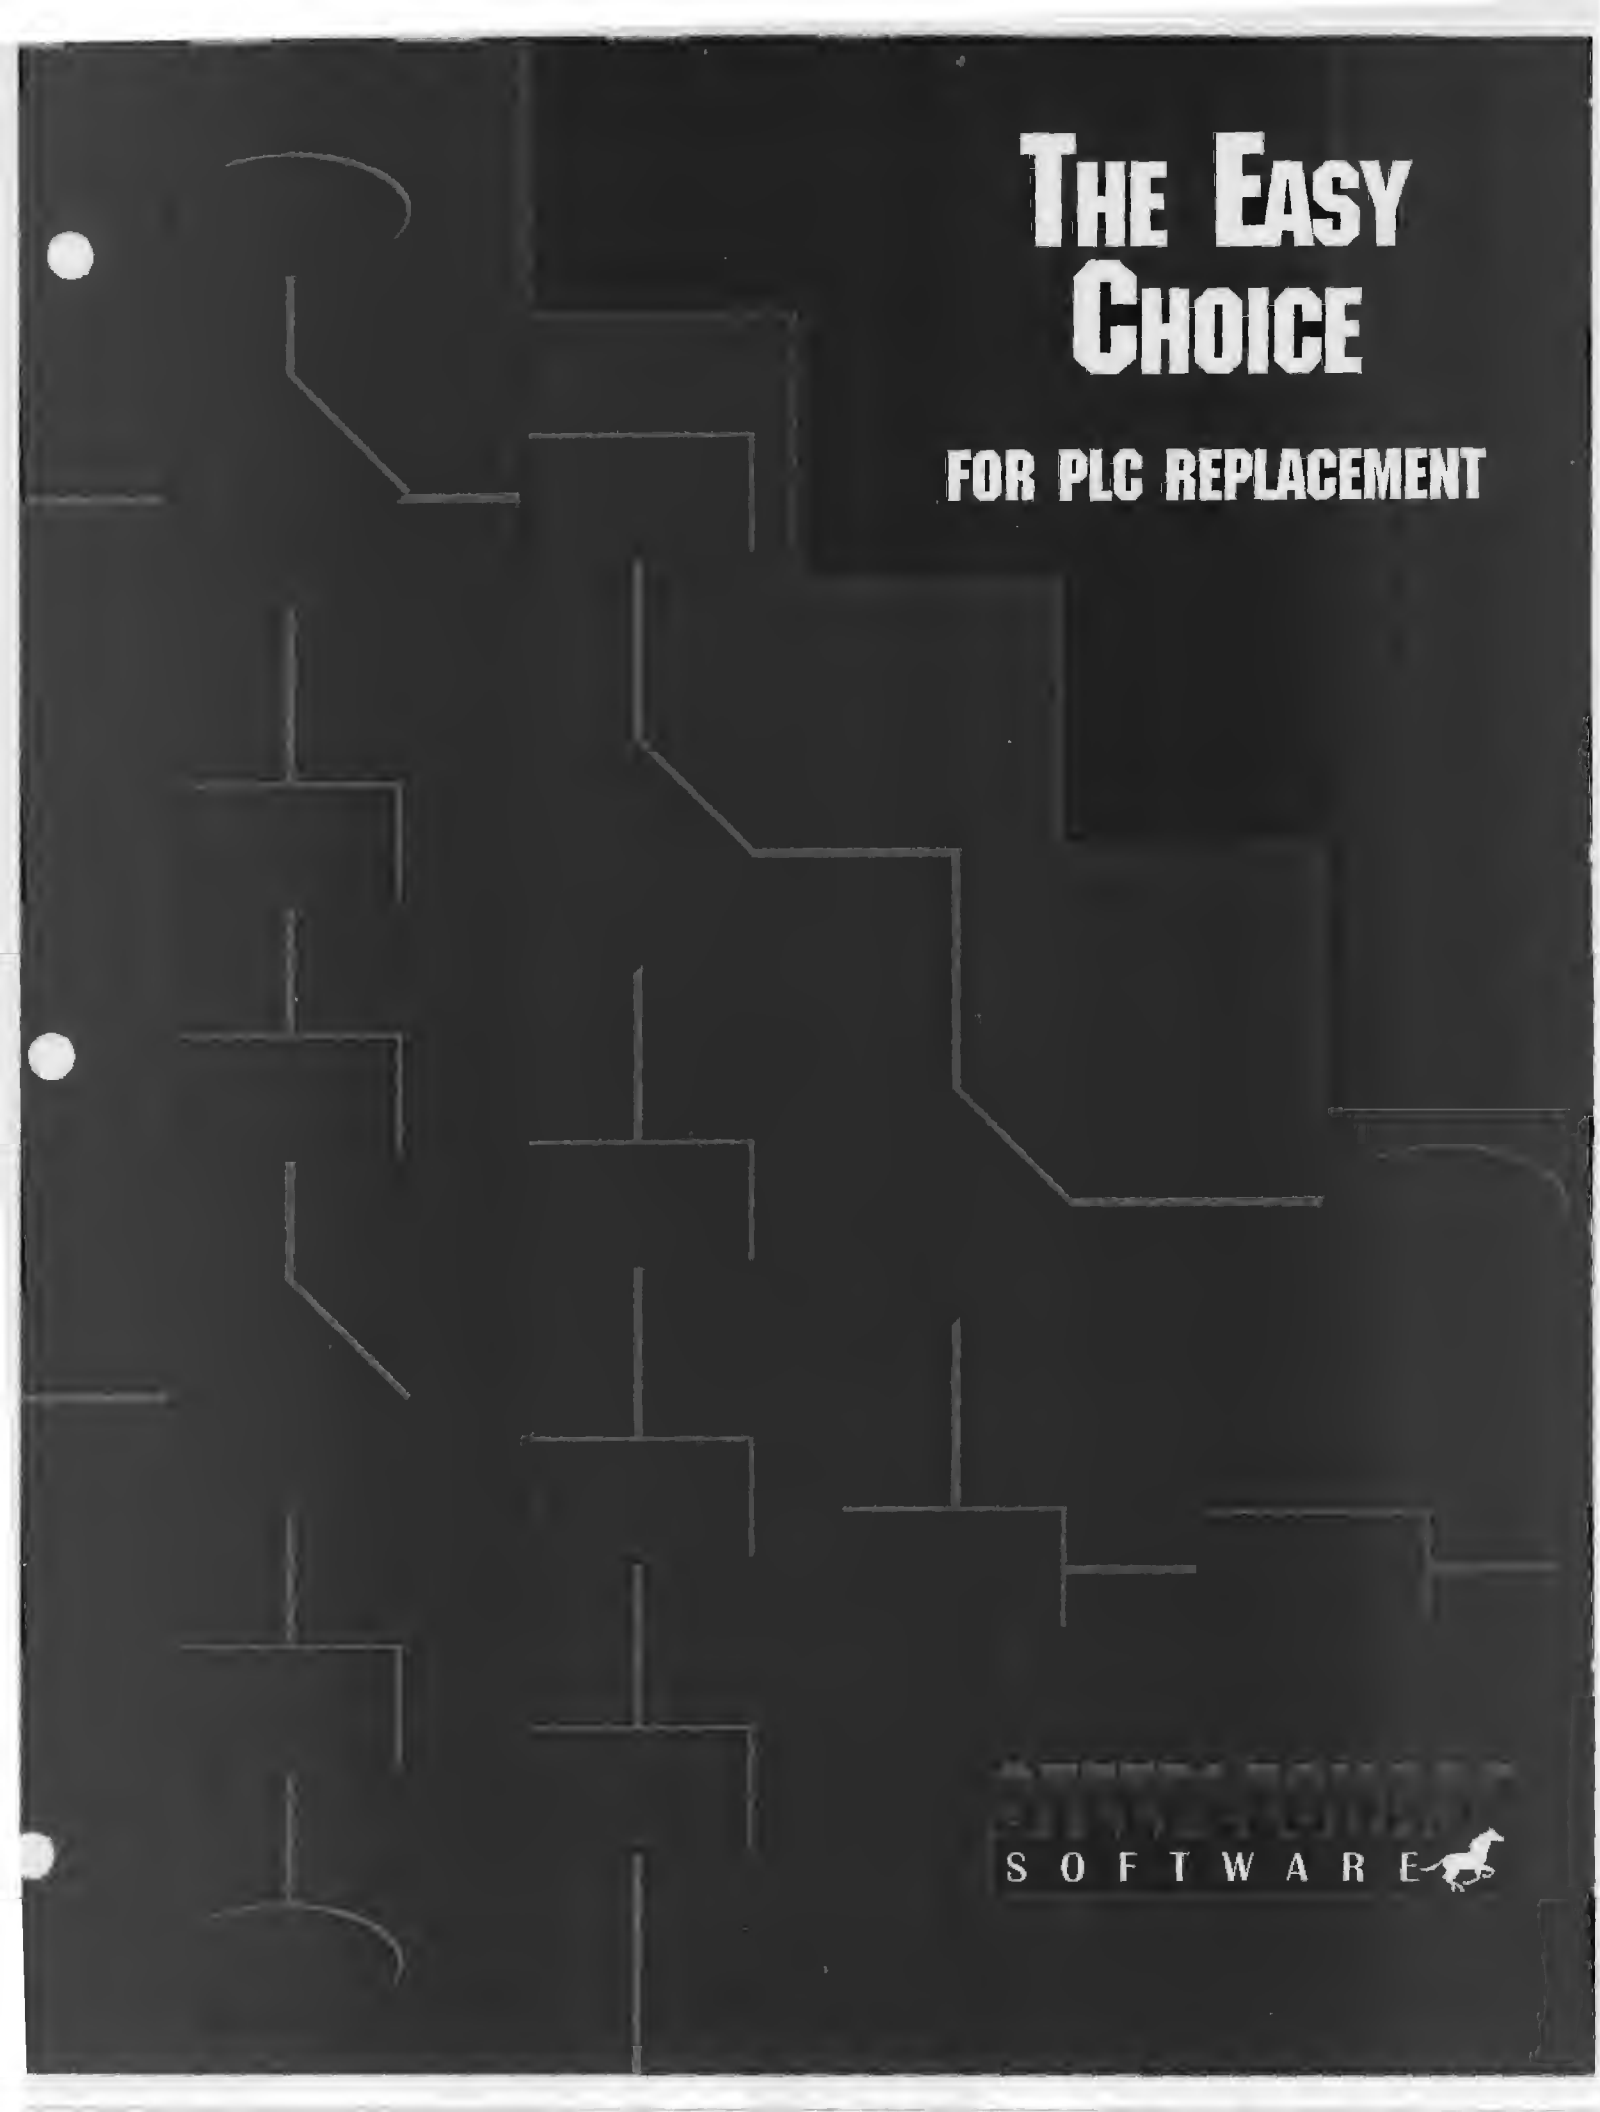
THE EASY CHOICE

FOR PLC REPLACEMENT

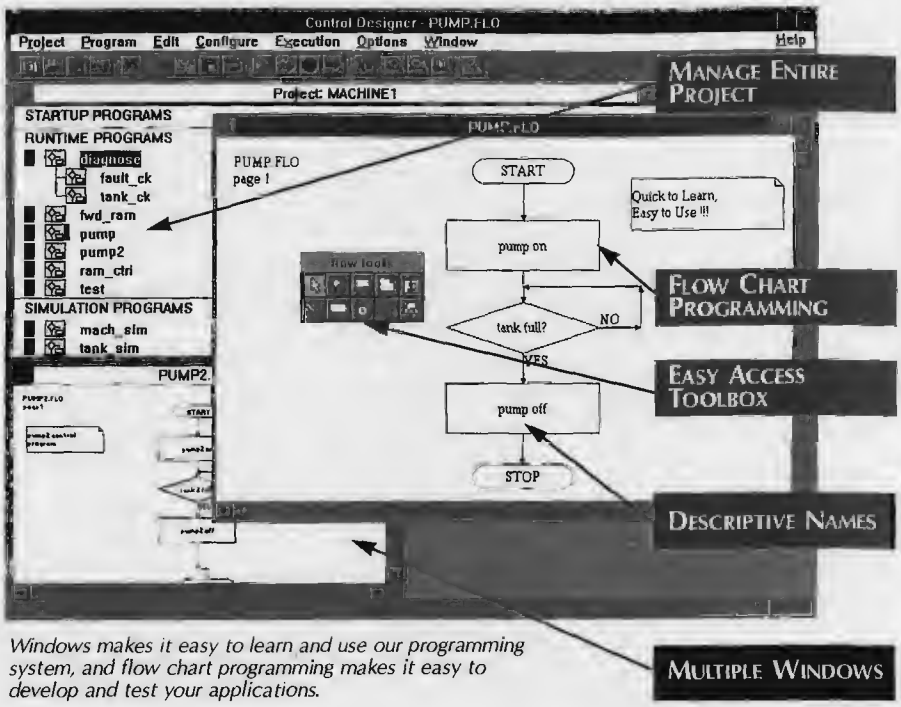


SOFTWARE

VISUAL LOGIC CONTROLLER

Replace Your PLC and Operator Interface with The Visual Logic Controller

Now there's an easy way to combine PLC programming and control with operator interface, all on the same computer. Steeplechase Software's Windows™-based software package, the Visual Logic Controller™, replaces three separate devices: PLC processor, PLC programming terminal, and operator interface panel. Just connect your PC to your choice of industrial I/O modules, and you're ready to run.



Windows makes it easy to learn and use our programming system, and flow chart programming makes it easy to develop and test your applications.

EASY CONTROL

With our real-time control, Windows interface and support for industrial I/O from major manufacturers, you can quickly and easily set up your PC to control high-speed machines with guaranteed real-time performance.

Design and run under Windows

Point-and-click software reduces your learning curve and speeds up development.

Program with flow charts

Intuitive flow chart programming lets you work the way you think. You finish sooner because you can do it right the first time.

Assign names to I/O points

Using descriptive names allows you to develop and maintain your control programs more easily. You can change physical I/O assignments or the entire I/O system, all without touching the rest of your application.

Test your application with the built-in simulator

Testing can proceed even before the machine is ready, so you complete your application earlier.

EASY OPERATOR INTERFACE

The operator interface uses the same descriptive names that you use for programming, which reduces errors during development and maintenance.

Design and run under Windows

Point, click and drag to create operator control panels quickly and easily.

Connect easily to your control program

Using the same names as your control program simplifies development; you can change I/O without changing your operator interface.

Access a broad set of panel tools

Easily display pushbuttons, indicators, meters, slide switches, message displays–or design your own devices with elaborate animation functions and imported graphics.

Visual Logic Contoller and VLC are trademarks of Steeplechase Software, Inc.

EASY INTEGRATION

In just a few simple steps, you can develop complex applications with fast control and flexible operator interface. Draw your flow chart and operator panels, assign your names to real I/O points, and plug in your I/O modules. We've eliminated so many steps, you could be done in half the time!

Combine programming, operator interface and control on a single PC

Everything works together seamlessly, so you can focus all your time and energy on making your application work.

Connect to I/O modules from all major vendors

Choose the best I/O for your needs from Allen-Bradley, APC Seriplex, GE Fanuc, and others. In just minutes, you can easily change from one to another, without changing your program or operator interface.

Easily share real-time data with other Windows programs on the same computer

Print production reports from Excel, perform statistical manipulations with Visual Basic, and even use your favorite MMI, all by accessing real-time control data through DDE.

Our field-proven operator interface software provides Windows simplicity during development, and Windows functionality during operation.

STEEPLECHASE SOFTWARE

The Easy Choice for PLC Replacement

With your involvement in factory automation, you know that your decisions can be critical to helping your company win the race against your rivals. And with worldwide competition, you're constantly required to run faster, jump higher, stretch farther. If you're leading, then you're trying to stay ahead; and if you're behind, you're trying even harder to catch up.

You're always searching for faster methods, better tools, more functionality. That's where Steeplechase Software can help. Our integrated solution lets you set up control and operator interface in dramatically less time. Thanks to our simple, intuitive approach, you'll bring new systems on-line faster — and keep them working longer with program monitoring that instantly pinpoints the problem.

What will you be doing with your extra time? Your knowledge of your company's processes represents your greatest value—and we can help you concentrate where you can do the most good: improving the process itself.

For all the details and a free information kit, call Steeplechase Software now at 313/995-3348.
